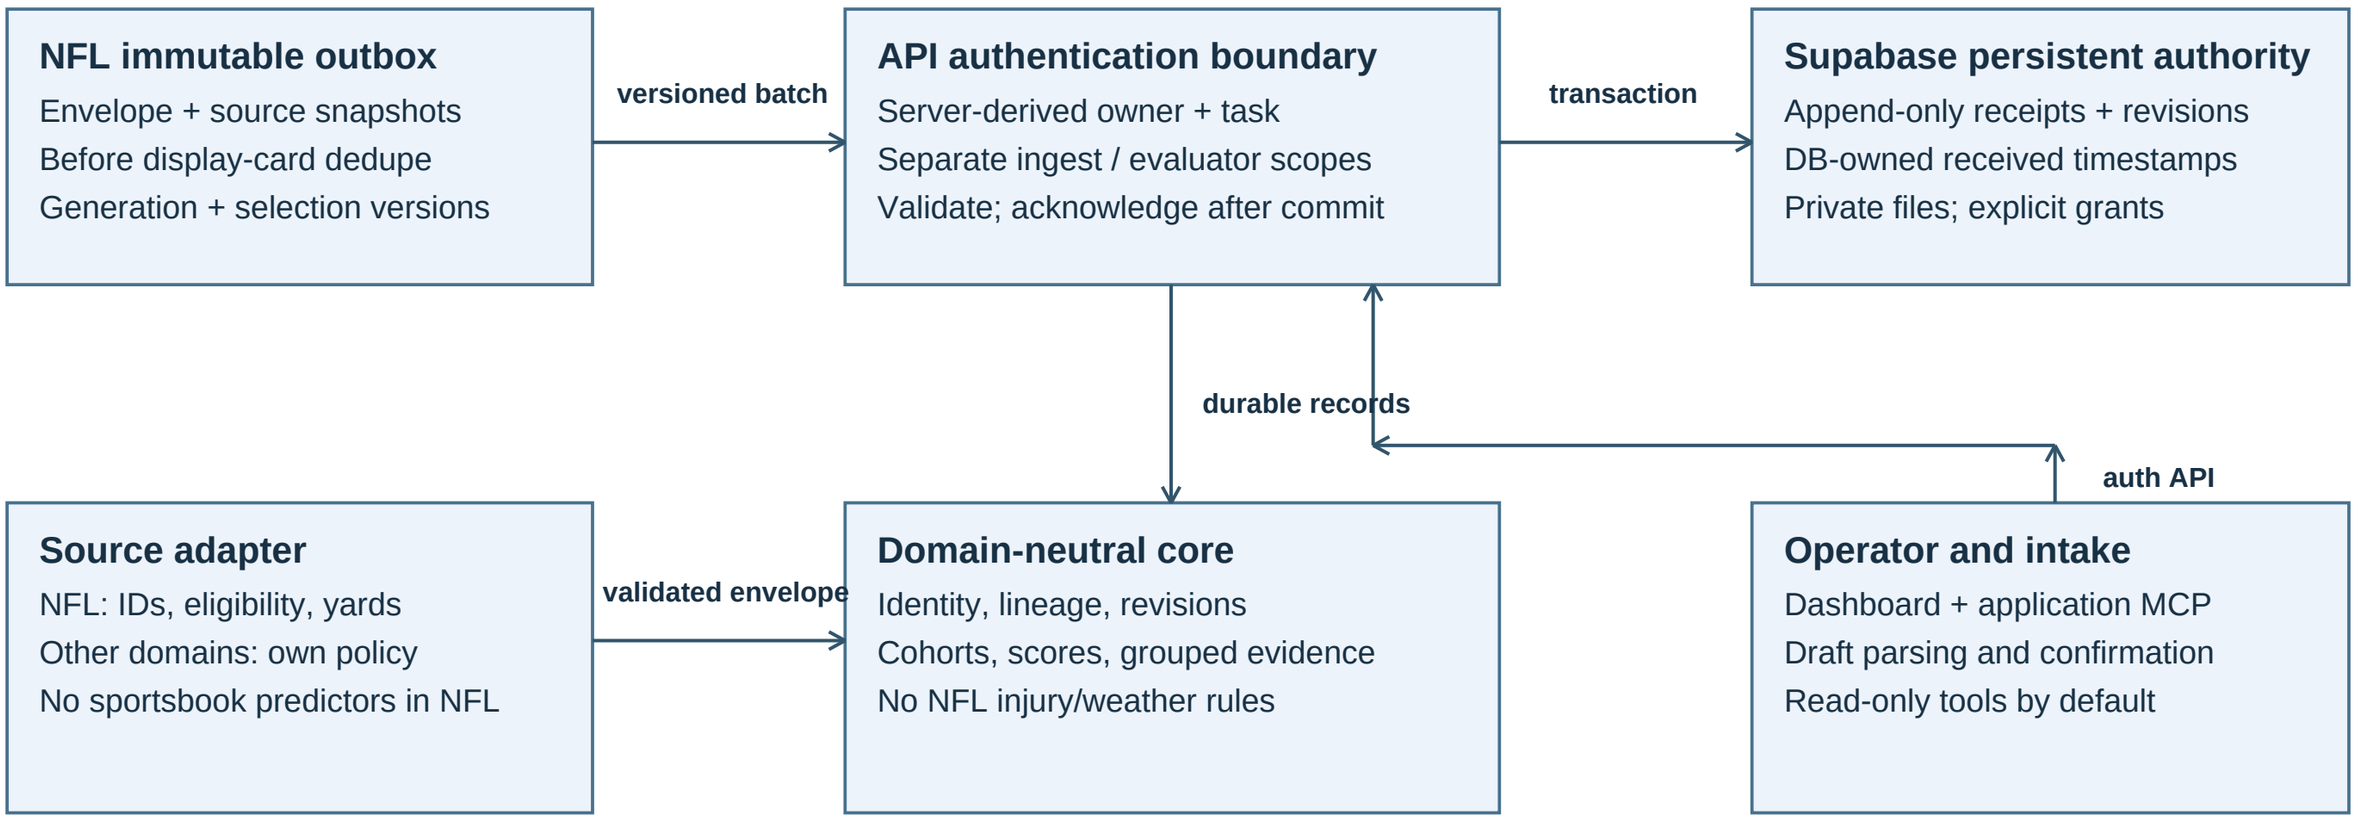
Components, contracts and persistence

Mid-level design: the database owns durable observations; NFL owns the contract users saw and what serves next.



Forecast identity

Contract ID != display card ID != source receipt ID != persisted envelope ID. Preserve each join explicitly.

Original versus correction

New outcome revisions supersede by chain. Old forecasts and evaluation manifests remain unchanged.

Production state

Vercel filesystem and local SQLite are not the hosted store. Supabase schema/API extensions still need build and approval.
